Security practices

Quantalyze is a data-analytics platform, not a custodian. We read your trade history from your exchange via a read-only API key and compute verified performance metrics. We never hold funds, never place trades, and never move tokens.

Key handling

CIPHER	Fernet (AES-128-CBC + HMAC-SHA256)
PER-ROW DEK	Generated when the key is saved, wrapped by a platform KEK
KEK STORAGE	Held only by the Python analytics service; each row records its KEK version so the KEK can be rotated
DECRYPTION PATH	Python analytics service under service-role client only; web tier cannot decrypt. Encrypted columns revoked from anon and `authenticated` roles.
SCOPE ENFORCEMENT	Validated against the exchange at submission; trading or withdrawal permissions rejected before ciphertext is written.

READ	TRADE	WITHDRAW
Accepted	Rejected	Rejected

Data handling

IN TRANSIT	TLS 1.3 and TLS 1.2 at the edge; TLS 1.0 and 1.1 refused
RAW FILLS RETENTION	No scheduled deletion; kept while the strategy exists. Account closure blanks identifying fields on fills
AGGREGATE ANALYTICS	No scheduled deletion; kept while the strategy exists (Sharpe, Sortino, drawdown, daily returns)
TENANT ISOLATION	Postgres RLS + SECURITY DEFINER trigger refusing cross-tenant `api_key_id` linkage on `strategies`
DELETION	Deleting a key removes its encrypted credential row; decryption path lost immediately. The strategy, its fills and its listing stay; archiving removes the listing from discovery. A key used by a published composite cannot be deleted: use the contact form to change that composite's keys
SUPPORTED EXCHANGES	Binance, OKX, Bybit, or Deribit (read-only scope on each)

Compliance posture

Preparing for SOC 2 Type 1; internal controls — access reviews, change management, vendor management, incident response — are documented and followed today, with the formal attestation to follow. Allocators under diligence: engage the security contact below for a current posture letter under NDA.

Coordinated vulnerability disclosure follows RFC 9116 via `/.well-known/security.txt`.
